

Creators of SMC Solutions

Since 1989, ACP (“Applications Composites et Plastiques”) develops, manufactures and transforms thermosetting composite reinforced with fibre-glass, type SMC. This material is used for a lot of applications: from automobile to aircraft. The 3 main sectors are: automobile, electric and construction.

SMC, an innovative product with many conveniences:

- Important mechanical features
- Low density (1.8 g/cm³)
- Heat insulation
- Electrical insulation (as required)
- Fire resistance (as required)
- Resistance to chemical products
- Dimensional stability
- High operating temperature
- Hard and resistant to impact
- Protection against rain, sunshine and dust
- Good quality / price ratio

ACP is a market oriented company: flexible, innovative and reactive in all areas of its business activities, products and services. We continuously invest in our employees as well as in new production technologies.

Our missions:

- *Help our customers finding innovative and cost effective solutions*
- *Manage the design and the manufacturing of production means*
- *Produce with the highest quality standards*

Our technical resources at your service

APU Moulding*

- Capacity to produce millions of pieces per year
- Nineteen 500-1200 tons hydraulic presses
- Suitable for moulds up to 32 tons

APU SMC

- One pilot line for new developments and one production line for your main SMC applications

Quality insurance

- Quality Safety Environment and Process departments to guarantee the quality of our process
- ISO 9001 V2000 certification
RAL-GZ 640 certification
Integrated SAP management system

A dedicated team for all your projects

- ACP: 75 employees, at the Saint-Dié-des-Vosges site, East of France, to help you create your SMC solutions
- A responsive and flexible production team Qualified in automotive APU
- A sales team, in charge of the division's development strategy
- A technical development team, whose main aim is develop SMC solutions
- A product / process development team, to advise you in your future projects

*APU: Autonomous Production Unit

MEA Group

ACP is a division of the industrial German group MEA founded in 1886 in Aichach. The MEA group employs 700 staff with manufacturing and distribution subsidiaries in eight countries: Germany, Austria, France, Holland, Poland, Czech Republic, United Kingdom and Switzerland.

The annual turnover of MEA's strategic divisions stands at 130 Million Euros, with very substantial free cash flow.

MEA focuses its strategy on international development, the creation of new composite and plastic applications and looks for new distribution channels to reinforce the competitiveness of the group.

Are you a professional working in the building, automotive, electrical appliances, public works, industry, health or catering fields?

Do you use composite and plastic applications?

ACP creates standard and personalised SMC solutions.

Our pilot or standard production lines are there to meet your every project.
